

**Maria Gornic**  
**Warehouse Specialist**

**My story is a case reflecting how to start over while always being positive and how to do your best to progress and advance a little bit more every day to achieve your goals.**

I am from Romania. I grew up and studied there until I got my degree in Electrotechnical Engineering for Medical Equipment. I loved my country, but being only 24 years old I didn't want to close doors on myself.

**I was a restless young woman eager to discover the world, so I accepted a scholarship in France for two weeks. Even though this was a very short period, it changed my life.**

In France I ran into my husband and I fell in love. He worked in Catalonia, so that was my destination, a place where I would end up raising my family and which I would consider my home.

My beginning here was very hard, away from my family and friends. I spoke Romanian, English and French, but they were useless for me to communicate in daily life and socialize. I immediately started to study Spanish

and Catalan, as I wanted to get to know the culture of the country and be able to return to my life as soon as possible.

**While I was studying I did not hesitate to work in all kinds of jobs, I didn't mind if they were related to my sector or not, I simply wanted to be active and have time to study to the fullest.**

I worked as a cleaner, shop assistant, catering and kitchen assistant... and meanwhile, my family was growing. The difficulties in validating my university studies and the dedication to my personal life made me neglect a little my work aspirations. But I didn't give up.

**After a while, I wanted to expand my knowledge and I enrolled in different courses and seminars so that I could get a position that I really enjoyed.**

And finally, almost 20 years after finishing my engineering studies, I landed here at DigiProces and recovered contact with the electronics industry with the hope of making up the lost time and redirecting my career.

Now at DigiProces I prepare everything that is necessary to start the manufacturing orders and manage the materials stored in our Kardex systems. I continue to train in this field actually, as I'd like to be the best in my functions.

**I love studying, learning and a well done work. I also count on my DigiProces colleagues for this. They have helped me to communicate better and be more effective. We are a team that goes beyond the company premises.**

Sometimes I remember that as soon as I finished university one of my professors offered me a position in his medical equipment company, the most important in the sector in Romania, a unique opportunity. But fate led me through another path. I don't know what would have happened if I had accepted that offer, but what I have achieved here and the journey I have experienced make me feel very proud of myself.

**I have realized that I am a resourceful woman and capable of everything. Each one has a different story and mine makes me very happy.**

 **DigiProces**
